

SOUROV HOSSEN

Junior SOC Analyst | Threat Detection | Incident Responder

Dhaka, Bangladesh | 01859926066 | sourovlimon85@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

Summary

Computer Science and Engineering student with a strong foundation in cybersecurity developed through hands-on labs, security research, and practical projects. Experienced in SIEM monitoring, log analysis, threat detection, security event investigation, endpoint telemetry, and network traffic analysis across Windows and Linux environments. Strong understanding of vulnerability assessment, process activity analysis, and security documentation, interest in SOC operations, threat analysis, and defensive security.

Education

Bachelor of Computer Science and Engineering (BSc in CSE)

Daffodil International University

2022–2026

CGPA: 3.55 / 4.00

Higher Secondary Certificate (HSC)

Gazipur Ideal College

2019–2021

GPA: 4.50 / 5.00

Technical Skills

- **Security Operations:** SIEM, Log Analysis, SOC L1 Fundamentals, Threat Detection, Incident Responder, EDR, Network Traffic Analysis, Security Event Investigation
- **SIEM & Monitoring:** SIEM Dashboards, Security Event Analysis, Log Analysis, Anomaly Detection, Endpoints Deployment, Severity Assessment, SIEM Rule Analysis
- **Networking:** TCP/IP, Subnetting, VLAN, Routing & Switching, DHCP, DNS, Wireshark Traffic Analysis, Network Security & Troubleshooting
- **Endpoint & Systems:** Windows/Linux Administration, Active Directory, Virtual Machines, User and Group Management, System Services
- **Security Assessment:** Application Security, Penetration Testing, Vulnerability Assessment, OSINT, Burp Suite, Nmap, Nuclei, Metasploit
- **Other Skills:** Machine Learning, AI LLM Fundamentals, Research, Problem Solving, Critical Thinking, Team Collaboration and Fluency in Bangla and English.
- **Programming & Automation:** Python, Bash, Java, JavaScript, C, C++, SQL, Security Automation
- **Hands-On Platforms:** TryHackMe, Hack The Box, PortSwigger, LetsDefend Home Labs

Security Projects

EchoMe – ML-Based Phishing Detector & Risk Assessment System

[Github](#)

- Engineered a security platform that analyzes files, emails, URLs, domains, and IP addresses to detect phishing activity and assess threat severity, supporting faster initial security triage.
- Automated feature extraction, classification, and real-time risk scoring to organize investigation evidence and reduce manual effort during security analysis.

ReconNio – Go-Based Reconnaissance & Security Assessment Toolkit

[Github](#)

- Developed a high-performance reconnaissance toolkit with 19+ authorized modules for structured security assessment of domains, hosts, and network-facing assets.
- Implemented structured JSON and console reporting to organize assessment findings and make security results easier to review and investigate.

DorkNio – OSINT & Google Dorking Tool

[Github](#)

- Built a browser-based OSINT platform for generating, validating, and analyzing advanced search queries during authorized security assessments.
- Unified intelligence gathering across web assets, URLs, domains, and IP addresses to support efficient security research and evidence collection.

Cybersecurity Labs & Experience

Security Operations & SOC Home Lab	Independent Home Lab
• Built a Splunk-based SOC monitoring lab across Windows & Linux environments, EDR telemetry, integrating Sysmon logs, and endpoint logs to centralize SIEM monitoring for alert triage, threat detection and event investigation. • Configured Sysmon and monitored authentication, process creation, and system activity to investigate anomalies, strengthen endpoint-focused detection, and support incident analysis. • Applied Sigma detection rules and mapped security events to MITRE ATT&CK; techniques, translating detection logic into alerts to identify suspicious activity, assess alert severity, and support structured threat investigation. • Correlated SIEM alerts with endpoint and network telemetry, performing evidence collection and log-source health checks to support accurate investigations and security documentation.	

Security Research Experience

A Hybrid Network Intrusion Detection System with Explainable AI	Undergraduate Research – In Progress
• Developed a hybrid Network Intrusion Detection System combining signature-based detection, anomaly detection, and deep learning to identify malicious network activity and support practical threat-detection workflows. • Integrated SHAP and LIME explainability to identify influential features behind detected attacks, providing interpretable evidence to support security investigation and analyst-oriented alert analysis.	
Identity Theft and User Cybersecurity Behaviors Predicting User Cyber Risk	Submitted to Elsevier
• Designed an interpretable machine-learning framework to assess user cyber risk and identify behavioral factors associated with identity-theft vulnerability across a dataset of 510 users. • Applied SHAP-based analysis to explain model decisions and identify high-impact risk factors, strengthening practical experience with evidence-driven security risk assessment.	

Certifications

Google Cybersecurity Professional (Google)	Junior Cybersecurity Analyst (Cisco)
CompTIA Security+ (Coursera)	Networks and Network Security (Google)
