

SOUROV HOSSEN

sourovlimon85@gmail.com 01859926066 Birulia, Savar LinkedIn GitHub Portfolio

Summary

Computer Science & Engineering student with a strong foundation in cybersecurity, security operations and networking. Hands-on experience with SIEM, vulnerability assessment, networking and security research through labs, projects and research. Interested in building practical skills and projects across SOC operations, threat analysis and offensive security.

Education

Bachelor of Computer Science and Engineering (BSc in CSE)	2022 – 2026
Daffodil International University (DIU)	CGPA: 3.55 / 4.00
Higher Secondary Certificate (HSC)	2019 – 2021
Gazipur Ideal College (GIC)	GPA: 4.50 / 5.00

Technical Skills

- **Security Operations:** SIEM (Splunk), Log Analysis, SOC L1 Fundamentals, IDS/IPS, EDR, Firewall Monitoring, Alert Triage, Network Traffic Analysis and Documentation.
- **Networking & Infrastructure:** TCP/IP, Subnetting, VLAN, Routing & Switching, DHCP, DNS, Wireshark Packet Analysis, Cisco Networking and Network Troubleshooting.
- **Offensive Security:** Application Security, Penetration Testing, Vulnerability Assessment, OSINT, Burp Suite, Nmap, Nuclei, Metasploit and Security Research.
- **Systems & Infrastructure:** Windows Administration, Linux Administration, Active Directory, Virtual Machines, User and Group Management, System Services.
- **Programming & Automation:** Python, Java, JavaScript, C, C++, SQL, Bash and Security Automation.
- **Other Skills:** Hands-On Platforms (TryHackMe, PortSwigger, Hack The Box, Home Labs), Machine Learning, AI & LLM Fundamentals. Problem Solving, Critical Thinking, Team Collaboration and Fluent in Bangla and English.

Research Experience

Undergraduate Research: A Hybrid Intrusion Detection System with Explainable AI *In Progress*

- Developed a hybrid Network Intrusion Detection System integrating signature-based detection, anomaly detection, and deep learning for accurate cyber threat detection.
- Incorporated Explainable Artificial Intelligence (XAI) using SHAP and LIME to provide transparent, interpretable, and actionable explanations for security analysts during intrusion analysis.

Identity Theft and User Cybersecurity Behaviors Predicting User Cyber Risk *Submitted to Elsevier*

- Designed a SHAP-based cyber risk score framework using interpretable machine learning to predict identity theft vulnerability across users.
- Achieved high classification accuracy using a hybrid ensemble model and identified the key factors influencing user risk profiles through SHAP-driven explainability.

Projects

EchoMe || *ML-Based Phishing Detector & Risk Assessment System* *GitHub Repository*

- Engineered a machine learning-powered security platform that analyzes files, emails, URLs, domains, and IP addresses to detect phishing attacks and assess threat severity.
- Automated a multi-vector phishing detection pipeline using intelligent feature extraction, classification models, and real-time risk scoring to accelerate security investigations.

DorkNio || *OSINT & Google Dorking Tool* *GitHub Repository*

- Built an advanced Google Dorking and OSINT platform that enables security researchers to generate, validate, and analyze complex search queries for authorized reconnaissance.
- Streamlined multi-source intelligence gathering through a unified interface, reducing manual OSINT effort while supporting security assessments of web assets, URLs, domains, and IP addresses.

ReconNio || *Go-Based Reconnaissance & Security Assessment Toolkit* *GitHub Repository*

- Developed a high-performance reconnaissance toolkit in Go featuring 19+ modules for authorized reconnaissance, providing a unified platform for efficient security research and assessment.
- Designed a modular and concurrent scanning architecture with structured output and console reporting to streamline security auditing and bug bounty workflows.

Achievements

Google Cybersecurity Professional (Google)	Junior Cybersecurity Analyst (Cisco)
CompTIA Security+ (Coursera)	Networks and Network Security (Google)
